WHO CAN ENROLL?
This course is open to upper division Food Science and Technology majors or upper division students currently enrolled in an upper division Food Science and Technology course.

WHAT DOES THE COURSE COVER?
The course is designed to improve Food Science students' writing and reading skills, so as to enhance their chances of success in their academic studies and in their professional lives. Applying a rigorous approach to sentence-level and larger-scale considerations of effective writing, in genres from letters and memoranda to proposals and reports, participants will learn to get more out of their writing process, increase the quality of their written product, understand the structural conventions of various academic and professional forms, and develop a writing style that functions smoothly and efficiently. Besides exposing students to readings about food and the food industry, the course will also address ways to present quantitative and qualitative data more effectively, both in words and through charts or graphs.

WHAT ARE THE COURSE BENEFITS?
• Fulfillment of the upper-division writing requirement by writing about issues clearly tied to your academic and / or career interests
• Development of oral and written communication skills in diverse contexts and for varied audiences
• Instruction in the writing conventions of the workplace and practice in writing professional documents such as letters, memos, reports and proposals
• Sharpening critical thinking skills, developing analyses, and making arguments appropriate to varied types of professional communications
